Problem–Solution Fit — EV Market Intelligence

Student: Ansh Shrivastava   Project: Global Electric Vehicle Market Intelligence Dashboard

Date: 28 October 2026   Team: Individual Project

Customer segments

Emily Johnson (EV Market Strategy Director), David Chen (Automotive BI Manager), and Dr. Sarah Williams (Sustainable Mobility Research Analyst).

Customer problem

Users need a consistent way to compare EV sales, categories, manufacturers, battery technologies, driving range, manufacturing geography, and customer ratings. Data can be fragmented or difficult to compare.

Proposed solution

An interactive Tableau dashboard with clearly defined KPIs, trend and ranking views, battery/range comparisons, geographic analysis, ratings analysis, and filters.

Why the solution fits

It groups related indicators into one exploration workflow and supports executive, consulting, and research questions without requiring users to manually combine many separate charts.

Assumptions to validate

Dataset coverage and freshness; comparable units; meaningful market-share denominator; availability and comparability of ratings; consistent manufacturer, country, category, and battery labels.

Validation plan

Reconcile KPI totals to source data, test filters, inspect missingness and duplicates, measure actual responsiveness, and request feedback from a representative user or supervisor.

Success measures

Correctly reconciled KPIs, working filters, documented source and limitations, readable charts, and verified conclusions supported by the actual dataset.

Evidence note: This is a project plan/documentation template. Add actual dataset source, screenshots, measured test results, and publication links only after completing and verifying the implementation.
