# Scalability & Future Plan

Student: Ansh Shrivastava    Project: Global Electric Vehicle Market Intelligence Dashboard

Date: 28 October 2026    Team: Individual Project

## Current system limitations

• Dataset coverage and freshness may be limited — High priority to assess.

• Some records may lack ratings, battery details, or consistent units — High priority for data quality.

• Manual refresh may be required — Medium priority depending on data source.

## Scalability plan

• User load: for a single-user prototype, save a local workbook; if wider use is needed, publish through an approved Tableau environment.

• Data storage: begin with a documented CSV/XLSX extract; consider a governed database/warehouse for larger datasets.

• Performance: use extracts, reduce excess marks, optimize calculations, and measure actual load/interaction time.

• Security: use permitted data, avoid embedding credentials, and follow platform access controls.

## Future roadmap

• Phase 2 — enrich dataset with regional sales and charging infrastructure.

• Phase 3 — add validated time-series forecasting and scenario comparisons.

• Phase 4 — add lifecycle-emissions metrics, scheduled refresh, and user feedback evaluation.

Evidence note: This is a project plan/documentation template. Add actual dataset source, screenshots, measured test results, and publication links only after completing and verifying the implementation.
